

Bhavisha Nayi

Full Stack Web Developer

I am a skilled Frontend Developer with a B.E. in Information Technology and comprehensive Full Stack Web Development training from Masai School, Bengaluru. With 2 years of experience at iView Labs and 4 months in B2Bindemand, I have honed my expertise in designing and deploying high-quality web applications. Leveraging modern technologies, I bring a strong blend of technical skills and practical experience, enabling me to deliver innovative solutions and drive project success.

Work Experience

Frontend Developer, iView Labs pvt. Ltd.

09/2022 - 07-2024

- Collaborated with international clients as a frontend developer to build ecommerce web applications and develop admin panels.
- Developed and deployed web applications for various internal projects.
- Created and customized client projects using Wix Editor and Wix Studio.
- Successfully completed a company project utilizing Wix Studio and Velo Code.

Frontend Developer, B2Bindemand

08/2024 - 12/2024

- Collaborated with backend developers and clients to gather requirements and develop a hospital management system from scratch, ensuring seamless functionality and user-friendly interfaces.
- Designed and developed an email marketing platform from the ground up, focusing on responsive design and optimized performance.

Frontend Developer, Vagaro Technologies

05/2025 - Present

- Worked on Vagaro's product. Implemented Forms module with collaborating in team of 3 frontend developers, 3 backend developers and web designers. Implemented listing, summary, individual and table pages and also implemented print and download functionalities.
- Worked on customer module with collaborating in team of 2 frontend developer, backend developer and web designer. Implemented customer's modal and tabs to display their data dynamically. Implemented Profile, Fomrs, Files, Notes, Appointments, Packages, Giftcards etc tabs. Implemented whole File structure in React.js with typescript and redux toolkit.

Educational Background

- Gujarati

Soft Skills

- Clear Communication
- Team Work
- Problem Solving

Interests

- Dance
- Sports

Projects

ELWOTOOLS

- Tech Stack: Proficient in React.js, Next.js, TypeScript, JavaScript, HTML, SCSS, and Material UI.
- Key Features Implemented: Developed essential ecommerce functionalities including products, cart, checkout (payment), and admin panel.
- Design and Implementation: Focused on designing and implementing product and cart pages, along with feature-specific tasks.
- Admin Panel: Developed and integrated a comprehensive admin panel for efficient management of ecommerce operations.

YPP

- Tech Stack/Tools: Proficient in Wix Studio and Velo.
- Key Features Implemented: Developed features such as profile management, profile uploads, profile details, and email automation.

Forms Module

- Tech Stack/Tools: React.Js, Redux, Sass, JsPDF, Context API
- Key Features Implemented: Developed features such as Forms listing, actions like duplicate, copy link, embed HTML code with dynamically updating height and width, delete, convert type etc, Summary page (dynamically display selected forms all responses with progress bar and tables as per their types, displayed files like images, pdf, video with preview as well), Individual page (list of responses in left side and selected response at the right side with print and download functionalities), Table page (selected forms responses with dynamic data and dynamic header as well as per given in api)
- Integrated API calls and handle loading and data optimisation as well.

Customer Module

- Tech Stack/Tools: React.Js, Redux/Redux toolkit, Typescript, tailwind css
- Key Features Implemented: Created whole File structure with typescript and redux toolkit. Implemented all the tabs and store each data in redux and dispatch dynamically as per tab key. Managed Profile tab with dynamical modals included forms to crud customer's data and family and friends data as well in another modal. Implemented Appointment, Classes, Products, Gift Cards etc tabs with listing and modals as per dynamic data fetched from api. Implemented other tabs like Notes(crud - handle notes texts with their types and display in listing), Soap/Forms (crud - displayed sidebar with forms list at the left side and forms response as per selected at the right side), Files (store files of appointment, customers and forms with upload/ delete/ edit functionalities)
- Integrated API calls for each tabs and stored data in redux. Integrated API calls for crud operations in particular tabs seperately.
